

## Module Resources

You may want to **compare your code to mine** (e.g. to find + fix errors).

For that, you find **multiple code snapshots** for this module here in this Github repository: <https://github.com/academind/react-complete-guide-code/tree/13-class-based-cmp>

**Usage instructions can be found on the page that link is leading to.**

Simply pick one of the snapshots in the `/code` folder - the subfolder names are chosen such that they are easy to match against lecture names in this course section.

You also find **section slides** (if available) in that Github repository.
